

Call for papers

Following the agreement with the organizers of the 2nd edition of the DigiHUBB Days conference, 28-29 November 2019, Cluj-Napoca, the editors of the **Historická demografie (Historical demography) journal** have decided to publish a special issue, drawing on contributions presented in the framework of the *Historical population, genealogical and prosopographical databases in Central and South-Eastern Europe* conference panel.

Given the inter-disciplinary character of the panel and the scientific focus of the journal (historical demography), we strongly encourage prospective authors to dwell on the historical and demographic issues revealed by their research, rather than describing the digital tools they employed. In order to enter the peer-review process, we expect the studies to focus more broadly on the historical field of enquiry explored by means of digital technology, and on the methodological and knowledge-related advances gained by using it. Another desirable focal point would be the scientific results already obtained through the use of a database or still envisaged. Thus, the research and its impact in the field of historical demography and population studies should prevail over a descriptive account of technical issues related to the building and functionality of a particular database project.

The interested authors should submit their papers (maximum length 75.000 characters) in English to the e-mail address **hdredakce@gmail.com** by **30 April 2020**, together with an abstract of 500-700 characters and a short list of three to five key words. The texts should be sent electronically in MS Word, *.doc or *.rtf format, the tables and graphs in black-and-white version together with their source data in MS Excel, images and maps in *.jpg or *.tiff format with a minimum resolution of 300 dpi.

Only those papers which will successfully pass the peer review process will be published. The *Historická demografie* journal is published biannually by the Institute of Ethnology of the Czech Academy of Sciences and the Faculty of Humanities, Charles University, Prague and is indexed in the Scopus database and ERIH+ (more information can be found on the journal website <http://www.eu.avcr.cz/en/publications/journals/historical-demography/>).
